

a name synonymous with safety, quality and flexibility

Company Overview

Founded in 1974, the Haycock & Hague name has become synonymous with the highest standards of safety, quality and flexibility. Historically, our core business was related to Pipework Engineering, but over the years we have significantly expanded our capabilities and capacity. Today, operating from our engineering centres in Selby and Hull with workshop space totalling in excess of 17,500 sq. ft., we are able to complement our core activities with total turnkey process engineering solutions.

Our management team and staff have built a profitable, sustainable business that delivers a balance of positive economic and environmental benefits to our clients. But we are not a company to stand still. We are determined to drive the company forward, continually developing and improving our products and services. This brochure sets out our ambitions, responsibilities and core business principles in meeting this challenge. Together, they define a common purpose achieved through the diverse resources of the company.

Our aim is to be a leading national business, specialising in services and engineering solutions for process related industries and the commercial and manufacturing sectors. We maintain and improve our wide range of skills by investing in an on-going programme of training and professional development. This allows us to nurture a company wide team spirit, which ultimately helps you to achieve your goals in a cost effective and timely manner.

Our commitment to you:

“To work in close collaboration with you ensuring that we both understand and help to address current and future needs, delivering high quality value for money solutions through our own efforts and those of our supply partners”
