

Project Data Sheet

Client: Tate & Lyle Citric Acid.

Contract Value: Reimbursable time & materials.

Description: Haycock & Hague (Pipework) Ltd assisted with the engineering of recent modifications to an existing cooling tower system.

The project included a detailed analysis of the cooling circuit capacity and the generation of system expansion proposals, leading to the project management, engineering, design, fabrication and installation of new cooling towers, support and access steelwork and various sizes of Carbon Steel pipework associated with the new cooling tower system.

Page 2 gives an indication of the new cooling towers integrated within the existing system.
